## REPORT OF THE SUPERINTENDENT.

---

*To the Board of Education of Union School District:*

The aim of a school report should be to enumerate the events of the year for the purpose of acquainting the Board of Education with the condition of the schools, and to act as a permanent record for the convenience of future generations. It should also serve as a means of advising the board of needful changes that the future may be even more prolific in satisfactory results than the past. At this point I beg leave to express my gratification at the union and accord of the educational forces of the district in providing and maintaining a system of education so well received by the general public. With an earnest and sincere desire to improve upon past accomplishments, I herewith respectfully submit my seventeenth annual report, being the forty-third of its series.

### THE IMPORTANCE OF THE SYSTEM.

We are proud of the fact that the United States leads the world commercially. This has been brought about by many different agencies, the natural resources of the country playing an important part; but aside from everything else, the American idea as exemplified in her public school system, perfectly free and unsectarian, is no doubt the controlling factor in the equation of success. The democracy of the public school, where the children of all classes are brought to the common educational crib, will eventually determine the permanency of republican institutions. No other system can so successfully maintain the unification of the republic, "insure domestic tranquility, and secure the blessings of liberty to ourselves and our posterity."

## SCHOOL WORK.

## GRAMMAR AND PRIMARY SCHOOLS.

One more year of untiring effort has shown positive results. Each successive year gives evidence of progress in all the different lines of legitimate school work. A school system must always be subject to change in order to adjust itself to ever-varying conditions — conditions which necessitate different methods of teaching and that demand legislation, which if allowed to lapse, would render the system inoperative. School work here deals largely with the so-called essentials. It is not my purpose to enter upon a discussion of “fads.” The popular conception of what constitutes a fad is so ill-defined that argument would meet with difficulty in finding a fair starting point. To show that our system cannot be fairly criticised for not dealing generously with the so-called essentials, I have prepared a table of close estimates showing the relative amounts of time given to each study in each grade. From this table, which may be found in the Appendix, one can learn that reading, writing, mathematics, spelling, and language, consume about two thirds of the entire time. By those who are experts in dealing with educational requirements, this is considered too great a ratio and they believe it should be largely reduced to the advantage of nature study, geography and history. From an extended experience in experimental observation, I believe more good to be derived from the study of nature in the lower grades, in proportion to the time given it, than from any other one branch. The steady progress in mathematics, noted in my last report, has suffered no abatement. The gain, due primarily to the system in use, comes also from the more intelligent handling of the subject by the teachers.

Improvement is also apparent in the way in which pupils express themselves in their written composition exercises. This consists, as regards matter — in brief, definite, comprehensive statement; as regards form — in paragraphing, capitalization, and punctuation. Much of this progress may be attributed to improved text-books, but more to the study

of standard selections which form the greater part of the reading courses. Heretofore, practice in English composition has been almost wholly written work. The apparent inability of pupils to express their ideas freely in oral speech, or to relate, in proper form, anecdotes and stories which have been told them, led the superintendent to prepare a schedule of exercises to alternate with technical grammar in the eighth grade. This provides abundant practice in oral and written narration, reproduction, dictation, and storytelling in its many different forms. What the results will be cannot be determined until succeeding grades may have given us a chance for observation and comparison. It is safe to say, however, that the time is not misspent.

All the other branches are being taught as skillfully as in previous years, and are subject to such changes as improved methods may suggest.

It is proposed to hold exhibitions of school work in the various buildings at the end of next term. This used to be a popular feature of the school year, and it is confidently expected that the coming event will be in no wise inferior to those that have preceded it.

The lower schools are in urgent need of geographical, historical, and physiological charts, and more supplementary reading matter to promote the better handling of these subjects.

#### GRADING AND PROMOTION.

The system of grading for a long time in use in the schools of the district, has its many disadvantages and bad features. It was originally designed and put into practice for pupils of average ability, leaving the very bright and the very dull pupils to pay the tribute of lost time to his "averageship." Many have sought and suggested plans for rectifying these faults, but as yet none has been found which can obviate every difficulty. The evils of the present system may be largely overcome in our schools by a plan of semi-annual promotion for the first six grades, embodying the following good features:

1. Pupils can be admitted to school twice each year. This represents a saving of one half-year to the pupils who are not old enough to enter in September but are old enough in January.

2. A bright pupil can complete the entire course in eight years, thereby saving one year of the present course.

3. A dull pupil failing of promotion is allowed a chance of being kept back but nineteen weeks instead of one year, as under the present plan.

4. During the first half of the seventh year, nearly all pupils have the advantage of one half-year's review in all the studies.

5. At the end of the first nineteen weeks of the year, a teacher knows whether a pupil stands a chance of promotion at the end of the year, and under the present plan she is obliged to use her energy in a hopeless struggle. The proposed scheme would entirely obviate this difficulty.

6. It would require the teacher to keep herself better prepared for general teaching.

7. Pupils would receive the stimulus of promotion twice each year.

The most serious objections are :

1. A larger number of classes for the lowest grade teachers.

2. The unevenness of the classes when the change is made from one plan to the other.

I have formulated this scheme, carefully weighed its advantages and its disadvantages, and have had frequent consultations with the teachers regarding it. I am firmly convinced that a trial of the plan will prove true all that has been claimed for it.

#### HIGH SCHOOL.

The high school has undergone a radical change in the teaching corps since my last report. Mr. Kent, for the past twenty years master of the school, resigned at the end of the spring term. Miss Cogswell, assistant, also resigned to accept a position at Wellesley College. The building up of

the standard of the school belongs in a great degree to these excellent instructors, and their worth is generally acknowledged and appreciated. The other members of the teaching corps were retained.

The board elected Mr. Frederick William Doring, of Woonsocket, R. I., as master, and Mr. Eben Fenimore Phillips, of South Dennis, Mass., as sub-master. Both of these gentlemen are earnest workers, and under their regime we hope the school will increase in popularity and broaden its field of usefulness.

A lunch counter was started in the basement during the winter term. This feature, long delayed, is in charge of Mr. Fred Emerton, and ever since its inauguration has proved its usefulness beyond measure.

The election of a sub-master was another step toward departmental teaching. Two teachers now devote their entire time to the teaching of English. The study of history has been extended to four years, but needs more adequate equipment. The school library also needs enlarging. Examinations have been instituted at irregular intervals in place of the former method. The principal has this to say in regard to the crowded condition of the school :

“ The hall has been divided temporarily by curtains into three rooms, and it is necessary to keep the laboratories in almost constant use for general recitations, to the great inconvenience of the classes in the sciences. There is every indication of a still larger attendance, and a continuance of the present inadequate accommodations would seriously hamper the future progress of the school.

“ To say nothing of the increased numbers, I would emphasize the fact that several improvements would have to be made to establish normal conditions with our present attendance. The biological laboratory is wholly inadequate. There are also needed a science lecture room and a properly lighted room for drawing, while to confine the laboratories to their legitimate object and to use the hall only for assembling the school, would require three additional rooms.

“The foregoing is a conservative estimate of what would be necessary to properly carry on the work of the school in its present scope. I earnestly hope, however, that the Concord High school may very soon be able to offer to its students a commercial course of the highest grade. The advantages are too obvious to require extended comment. With expert instruction and a proper equipment, it will give the opportunity to combine with a broad general education a special training of immediate value in practical life. Such a course is of itself a justification of the demand for ampler accommodations, ensuring as it will a broader field of usefulness for the school.”

#### MILITARY DRILL.

In many particulars this branch has had the most successful year of its history. Competent judges at the annual competitive drill pronounced the exhibition in “The School of a Soldier” and the “Manual of Arms” the finest ever presented in this city. There is now a battalion of two uniformed companies and a small un-uniformed company, and we are gratified that their general military knowledge and drill work show a gradual development. The discipline has been meritorious and the arms and accoutrements are in good condition.

It is interesting to note that Clinton Thompson, a captain, has entered the Naval Academy at Annapolis, and Clark P. Chandler, at present a sergeant of one of the cadet companies, recently received an appointment to the Military Academy at West Point.

Military drill for the girls was wisely discontinued and calisthenics substituted in its stead. The instruction of both the boys and girls has been efficient and complimentary to Major C. L. Mason, to whose zeal and skill the success is mainly due.

#### ATTENDANCE.

The conditions governing school attendance have not changed largely since one year ago. There is a material increase each year from which it may be inferred that the city

slowly gains in population and that the schools still retain the confidence of the general public. The north end schools have been relieved by forcing pupils toward the south. If there were suitable accommodations at the Union street building it could be used to advantage. All available space at the Kimball school is utilized and pupils belonging here by right are forced to go to the Chandler and Rumford buildings in consequence of relieving the pressure from the north. The Plains school has been larger than ever before and the number of grades and more numerous classes make the conditions here the most unsatisfactory in the district. A new four-room building is sadly needed in this growing part of the city. The teacher and the pupils are earnest workers and deserve better accommodations. The new Rumford building was completed in time for the opening of the fall term. Before being occupied it was thrown open for the inspection of the public and it was generally commended as being commodious, well-constructed, and satisfactory in about every way. It certainly compares favorably with any other building of its kind in the state and is a credit to the district and the committee who built it. Eight rooms were occupied from the very beginning, and but one regular room was opened at the Chandler building. This arrangement was made in the spirit of economy. The Eastman school has gained about thirty pupils in the last year. Next year bids fair to see this increase duplicated, thus making the conditions such as to necessitate the finishing of the other room.

The attendance is kept more uniform by the strict enforcement of the truancy laws. Each succeeding year shows that the policing of the district for truants and absentees as pursued by Mr. Johnson is effective and wholesome. Tabulated statistics may be found in the Appendix.

#### BUILDINGS.

Few cities of its size have so many desirable school buildings as Concord. They are commodious, well heated, and for the most part well ventilated. The building equipment of a school system is an important part of its stock in trade.

The effect of a well-ordered building upon the conduct of the pupils and the general morale of school work can be appreciated fully by those who observe the every-day working of a school system. During the past year the care of the buildings has been more closely supervised than ever before, with the result that the loss to the city by a lack of proper repairs has been arrested, and if this policy is continued as it ought to be it will insure the district against serious depreciation of the value of the plant.

The use of soft coal has badly injured the interior of some of the buildings, a necessary evil which we hope may not recur.

Nothing has been done this year in the way of decorating schoolrooms. The rules and regulations forbid pupils giving anything toward this worthy object but I believe an exception should be made in its favor.

#### DRAWING.

We are fortunate in having had no changes in instructors or courses since last year. The aim has been to raise the standard of the work in quality. In the best schools art and manual training are closely correlated, it being evident that greater value is gained through designing and constructing than through designing alone. Without the construction both the motive and the incentive for expressing ideas are taken away. In our schools there is a serious break in hand-training between the kindergarten and the seventh grade. This can be obviated by taking time from the regular studies and devoting it to the different forms of this work. A beginning has been made in the fifth and sixth grades for the boys while the girls are at the sewing school, by giving them good drill in the study of form, good proportion, fine space relations and harmony of color through basket making. The drawing in the high school is not on a good basis but proposed changes for next year's course suggest better conditions. The studio classes have increased to fifty students, work being carried on to much better advantage in the Chandler building. The

instructor joins with me in deploring the fact that nothing has been done toward schoolroom decoration. I trust I may be pardoned for renewing my appeal for aid in this meritorious work through voluntary contributions by the pupils.

#### MUSIC.

This department has been conducted with the efficiency which has characterized it before. A decided effort has been made to strengthen individual work through written tests and individual singing before the entire school. The high school chorus, numbering about one hundred and twenty voices, prepared and gave to the public on February 26 "The Building of the Ship" by Lahee. Like the concert of last year it was a pronounced success and netted a small sum to add to the treasury fund.

The usual effective work has been done with the pupil teachers of the training school. A course was arranged for the kindergarten normal classes with special reference to voice training, the study of the child voice, children's songs, and melody writing for children's voices.

#### TRAINING SCHOOL.

The sphere of usefulness of the training school is as wide as heretofore. Its fame has forced itself beyond the city's limits. The standard gains with the advancing years and the institution still remains a forceful element in our system of education.

The primary and grammar classes of pupil teachers are much larger than they have been for the past few years. The training has been conducted upon nearly the same lines as before and the instruction has shown that power which a successful experience of many years and a true devotion to duty alone can give.

The kindergarten normal classes are well organized and thoroughly devoted to their work. The corps of lecturers has been stronger this year than last. The first class of eleven

young ladies graduates next June. Their attention to work and their theoretical and unusual practical training should make them strong teachers from the start.

Some people, who have failed to acquaint themselves with the true conditions, think that school room which ought to be devoted to the accommodation of the pupils is now utilized by the training teachers. This is not so. The full amount of floor space fit for pupils' sittings is utilized by them and no more room could be had if there were no training classes. The kindergarten normal classes are not only a distinct educational acquisition to the district but also a financial investment.

#### SUPERVISION.

The supervision during the last year has been closer than ever before. At best the amount of time is limited enough when we consider that there are sixty-two regular teachers, and eight special teachers representing music, drawing, wood and iron working, sewing, cooking and military drill.

Divorcing the financial agency from the superintendency gave the superintendent more time and it has been employed according to his best judgment in frequent teachers' meetings and additional visits to the schools. It is expected that the coming year will see the superintendent's field of usefulness still further widened by lectures and special meetings designed to promote the general educational culture of the teaching corps.

#### MANUAL TRAINING.

##### WOOD AND IRON WORK.

The enrollment of pupils for this department is about the same as for last year. The high school sends two large and enthusiastic classes. The interest does not flag and the execution of the work is improving. This is noticeable in iron-work, wood-carving, and in the introduction of a new branch, pyrography.

At the end of the summer term Mr. Stewart, the efficient assistant, resigned to accept a more lucrative position elsewhere. Mr. George L. Fogg was elected to fill the position, which he retained until the end of the fall term when he resigned on account of ill health. Mr. Edward A. Gordon is now serving as assistant with ability. Nine pupils are making engines of various sizes, and it is proposed to give some instruction in soft metal molding and casting to a limited number. Something may be done also in Venetian iron-work, and I think it wise to take some steps toward introducing forging, for the educational value of this work is as great as any other subject being taught here. A room with a cement floor would be needed. I would also suggest that a plan of correlating this work with elementary physics be considered and, if found practicable, adopted. I still have a firm faith in the efficacy of all forms of manual training, and believe our efforts should be bent in making this work strong in every department.

#### SEWING.

The number of pupils enrolled in sewing at the present time is four hundred forty. The large number taking sewing led to a change of quarters in the fall term. The Chandler building offered better facilities for carrying on the work and one of the unused rooms was called into requisition.

It is to be deplored that the high school classes have become so small that only nine pupils are now enrolled. This affects seriously the advanced work which added so much to the annual exhibition of last June. Another year will bring the new departure of garment cutting and it is hoped that sufficient time will be allowed to insure its success.

It is gratifying to note the unusual absence of friction in this department, and I am pleased to report excellent work.

## COOKERY.

During the fall term Miss Harriet C. Gilmore, for a number of years teacher of cookery and domestic science, resigned on account of ill health.

Her place was filled by the election of Miss Harriet D. Gerould. The work is now conducted upon the laboratory plan and is largely individual. This change called for more gas burners and other material and the method has infused new life into the pupils, making the future standard of house-keeping in Concord look much brighter. We are certainly to be congratulated that Concord is the only city of the state that now supports a department of cookery, but if it is to assume that importance which is certainly its due, better conveniences should be furnished. The room in use is so inadequate both in size and equipment as to make conditions for sanitary teaching inconsistent with the surroundings. If an annex to the high school should be built, we should make provision for a new room which should afford all the conveniences necessary for the proper handling of this work. The school is in excellent condition, the teacher earnest and competent and the pupils interested to an unusual degree.

## CONCLUSION.

The schools have maintained the reasonable discipline and the scholastic standard of former years. This has not been done without earnest work, careful planning and no little anxiety on the part of all connected with the details of its execution.

LOUIS J. RUNDLETT,

*Superintendent.*

# APPENDIX.

TABLE OF ATTENDANCE  
FOR THE YEAR ENDING JUNE 28, 1902.

SCHOOLS.	Length of school in weeks			Whole number of children pupils registered.			Average membership.	Average monthly attendance.	Average daily attendance.	Per ct. of daily attendance based upon av. membership.	Number of cases of tardiness.	Average number of tardinesses to each pupil.	Whole number of pupils under 6 years of age.	Whole number of pupils over 16 years of age.	Whole No. pupils, bet'n 6 and 16 years of age.	Number of visits by committee.	Number of visits by superintendent.	No. of visits by parents, citizens and others.	No. of pupils not absent or tardy during the year.	No. of cases of corporal punishment.
