BOARD OF HEALTH REPORT.

To the City Council:

The board of health submits the following report of the work of the sanitary department for the year ending December 31, 1907:

This board met and organized under the new ordinance, February 25, 1907. Regular monthly and several special meetings have been held since that date.

There has been no serious epidemic or call for unusual action on the part of the board, although each month brings its quota of routine matters to our conference.

At our March meeting Dr. Charles Duncan of the New Hampshire Laboratory of Hygiene was appointed milk inspector at a salary of \$300 per annum. He proceeded to take up the duties of his office at once.

At a special meeting called later in March, "regulations for the sale and care of milk" were adopted. The regulations in the form of an ordinance have been endorsed by you, and go into effect January 1, 1908.

We feel that, working along the lines of reform outlined in this ordinance, the milk inspector will be able to bring about some very beneficial improvements in the storing and marketing of one of our most important food products.

The board wishes to express its appreciation of Doctor Duncan's tireless efforts in support of the milk ordinance. We also commend the tactful and enthusiastic manner with which he has proceeded to take up his work.

For details, please refer to the milk inspector's report, which we transmit herewith.

Early in the fall some regulations in regard to vaccination of school children were adopted. These regulations are such as seem reasonable and proper to the board and

have resulted in materially reducing the number of unvaccinated school children in all the wards of the city. This is especially true of the so-called central wards.

We consider this a matter of great importance and wish to impress upon the community how harmless vaccination is, and how truly wonderful is the protection it affords from smallpox.

During the past year a large number of cases of diphtheria have been thrown upon our department for support and treatment during quarantine. There is no way to escape our responsibility toward these people, and our appropriation suffers accordingly. Antitoxin and skilled nursing come high, but are indispensable in these cases.

Mr. Palmer, the sanitary officer, has shown the same high grade of executive ability as usual in the discharge of his duties and the board wishes to express thanks to him for so heartily coöperating with it in the interests of public health.

You are referred to the report of the sanitary officer for vital statistics, statement of expenditures and detailed account of the routine work of the department.

This report is hereby made a part of our own and transmitted herewith.

Respectfully submitted,

CHARLES R. CORNING, *Chairman, ex-officio,*

CHARLES H. COOK,

GEORGE COOK,

Board of Health.

HEALTH DEPARTMENT.

REPORT OF SANITARY OFFICER.

To the Board of Health:

GENTLEMEN: Herewith is submitted the annual report of the sanitary officer covering the work of the health department for the year ending December 31, 1907:

MORTALITY.

During the year there were four hundred and twenty-eight deaths, compared with four hundred and twenty-four in 1906. The death-rate, exclusive of deaths of non-residents in public institutions and still births, was 15.2, compared with 15 in 1906. Transfer permits were issued for the removal of one hundred and fifty-four dead bodies for interment in other places. Seventy-seven bodies were brought from other places to this city for interment.

CONTAGIOUS DISEASES.

Two hundred and eighteen cases of contagious diseases were reported to this department during the year, with three deaths, compared with one hundred and seventy-five cases, with six deaths in 1906.

There were sixty-three cases of diphtheria, with two deaths. Oftentimes the physician is not called in the early stages of the disease, when the administration of antitoxin would almost invariably save the patient, but if given later in the disease the same results could not be obtained. Nearly all the physicians of the city now use antitoxin in the treatment of diphtheria, and the health department furnishes it to those who are unable to pay for it.

There were twenty-six cases of scarlet fever with one fa-

tality. This is the first death from this disease in eight years.

There were eleven cases of typhoid fever and one hundred and eighteen cases of measles with no fatalities from either disease. This is a record that is encouraging.

FUMIGATION.

The cost of fumigation supplies for the year was \$67.18. Formaldehyde gas liberated by potassium permanganate was used through the year with good results. A table showing the amount of fumigation done will be found elsewhere in this report.

VACCINATION.

As a rule the vaccination law has been complied with by the school children, though there are still a few who are not registered at this office. No child is entitled to attend school in the city without a vaccination certificate bearing the seal of the board of health.

RABIES.

During the latter part of the year several dogs were reported as acting strangely and two were killed by a veterinary surgeon. It was decided by the board of health that all dogs suspected of being infected with the rabies should be reported to this office. One dog was reported as having bitten a human being and on investigation this was found to be true. The dog was at once killed and the head sent to the laboratory at Hanover for analysis. The diagnosis was reported as positive and at once the person who had been bitten commenced taking the Pasteur treatment. Almost all authorities are agreed that the Pasteur treatment, if applied within a week after a bite by a rabid animal, will almost surely prevent the development of the disease. Dogs suspected of being bitten by the rabid dog were placed in quarantine.

MILK LICENSES.

Any person selling milk, skim milk or cream in the city of Concord must hold a milk license issued from the office of the health department. These licenses are issued annually in the month of May. Persons selling only the products of their own cows receive a free license upon application to that effect, and those buying milk and then re-selling it pay the sum of two dollars. One hundred and seventy-seven milk licenses were issued in 1907, and the sum of \$193.50 was collected.

INSPECTION OF MILK FARMS.

In company with the milk inspector I commenced an inspection of milk farms to aid the dairymen in preparing to comply with the new milk ordinance, which goes into effect January first. During the summer and fall twenty-nine milk farms were inspected and suggestions made to the owners for the better sanitary condition of the barns and greater cleanliness in the care of the milk.

In many instances the dairymen only need to have their attention called to the changes and improvements needed in their methods, and many have promised changes for the better care of the barn and milk room.

Passed October 14, 1907.

PLUMBING.

I made water tests of all plumbing after plans were submitted and permits issued. In several instances peppermint tests were made of old work. As a rule the plumbing ordinance was complied with. The old plumbing in eight of the buildings at St. Paul's School was tested and a number of defects found. The result was that the plumbing was repaired and the buildings placed in sanitary condition.
