SIXTH ANNUAL REPORT

OF THE BOARD OF WATER COMMISSIONERS TO
THE CITY COUNCIL, FOR YEAR ENDING JANU-
ARY 31, 1878.

BOARD OF WATER COMMISSIONERS.

GEORGE A. PILLSBURY, Mayor, *ex officio*.

BENJAMIN A. KIMBALL.....to March 31, 1878.
JOHN M. HILL.....to March 31, 1878.
SAMUEL S. KIMBALL.....to March 31, 1879.
LUTHER P. DURGIN.....to March 31, 1879.
JOHN KIMBALL.....to March 31, 1880.
WILLIAM M. CHASE.....to March 31, 1880.

OFFICERS.

B. A. KIMBALL, *President*.

JOHN M. HILL, *Clerk*.

CHARLES C. LUND, *Engineer*.

V. C. HASTINGS, *Superintendent*.

REPORT.

To the City Council:

The Board of Water Commissioners herewith present their Sixth Annual Report, being for the municipal year ending January 31, 1878.

PECUNIARY SUCCESS OF THE WORKS.

It is a subject of congratulation that, notwithstanding the long-continued and severe prostration of business in this community, and the consequent depression of our mechanical and industrial interests, greater now than at any previous time, there has been during the past year a gratifying increase in the revenue of the Water-Works, tending to confirm the impressions expressed in our last report, that upon the return of our accustomed prosperity, we may expect this enterprise to become at once self-supporting, and eventually to be a source of considerable income to the city. The receipts from water-rents have been \$20,373.42 against \$18,770.55 in 1876, a gain of \$1,602.87. The receipts from all sources, \$20,763.03 against \$19,001.07, a gain of \$1,761.96.

DURABILITY AND PERMANENCY.

Five years have now elapsed since water was supplied through these Works, and the test of time has been exceedingly favorable to both the kind and character of the work, reflecting great credit upon the contractors for the faithful

manner of its execution, and affording abundant promise for its present security and future permanency. The repairs during all this time have been comparatively slight, much less, we think, than if the mains had been of iron. The maintenance of these repairs for the time indicated was made the duty of the contractors by the terms of the contract, and has been faithfully performed. Year by year the expense has been decreasing, and for the last year has not exceeded seventy-five dollars; and now that the Board is about to assume this new liability, we may confidently count upon a probable future cost of little amount.

SEWERAGE—ITS ADVANTAGES.

The extensive sewerage put in by the city during the seasons of 1875, 1876, and 1877, aggregating fourteen and one fifth miles, following exclusively our lines of street mains, has been of incalculable convenience and great sanitary advantage to our people, and has added materially to the profits of the Water-Works. Sewerage has naturally and necessarily succeeded the introduction of water, and its favorable results to these Works are yet far from ended. We may expect a gradual and material increase in receipts from this source for several years to come.

IMMUNITY FROM FIRE.

During the five years since the construction of these Works, the total losses by fire in the Precinct, as shown by the reports of the chief engineers of the fire department, have been as follows: 1873, \$65,340; 1874, \$10,501; 1875, \$18,710; 1876, \$15,300; 1877, \$4,800—total, \$114,651. Deducting the amount of losses in 1873, the first year of operation, and before the firemen had acquired a practical knowledge of the working of the hydrant service, the aggregate for all the four remaining years reaches only \$49,311, or less than the sum of any single year's losses of the five years preceding

the use of Long Pond water. The reason of this is apparent to the most casual observer, and is due solely to the readiness with which streams of large volume can be brought into requisition in times of fire, and to the abundant and never-failing supply. The two successfully managed fires in the winters of 1876-7 and 1877-8, of the large barns filled with hay and other combustible material, in dangerous localities, and occurring under circumstances and conditions of the elements which carried terror and consternation to thousands of citizens at the prospect of a conflagration which no human power might be able to stay, fully developed our resources for water, and saved more than the cost of the entire Works. With the scanty and often inadequate supply under the old system, who could have foretold the consequences?

MAINS AND SERVICE-PIPES.

By the action of the Board, early in the year, the superintendent was instructed to assume the laying of all water-mains and service-pipes, making purchases of pipes and materials, and employing all necessary labor. This has insured to us the constant services of a person of fair skill to perform this work and to aid the superintendent in general care and management and office labor. The expense of laying for the year 1877 has been, 4,170 feet pipe, costing \$1,015.98; average, 24½ cents per foot;—in 1876, 4,346 feet pipe, costing \$1,477.97; average 34 cents per foot. This shows a very decided decrease of expense under the present arrangement. The charges for the care and repairs of hydrants have been \$156.92, which is included in the item of general care and maintenance.

THE WORKS AS AN INVESTMENT.

We cannot forbear adverting to the fact that the Works are now, *practically*, a paying investment. The legitimate running expenses for the year, as shown by the city treasurer's and superintendent's reports have been,—interest on

bonded debt, (\$350,000) at 6 per cent., \$21,000; care and maintenance, \$2,317.07; total, \$23,317.07. The receipts are \$20,373.42; apparent deficit, \$2,943.65. With the moderate allowance of fifty dollars each for the use of ninety-three public hydrants, we should have an addition to our receipts of \$4,650, and an excess of \$1,716.35 over expenses. It will not require more than a couple of years, allowing the same ratio of increase as in the past two years, to equalize the income and expenditures, and afford the city the free use of water for fire purposes.

LAND DAMAGES, FLOWAGE.

During the past year the sum of \$283.40 has been paid for land damages at Long Pond. All claims on this account are now extinguished except one, comparatively small, and the complete right of flowage to the height of 185 feet has been substantially settled and secured.

NEW DAM AT THE WASTE-WAY.

Under the requirements of the Holden award, a new and substantial earth and stone dam has been built at the waste-way near Forge dam, under the supervision of Messrs. J. Kimball and Durgin, committee. The immediate structure at the overflow is all of cut stone, laid deep, and completed in a very substantial and workmanlike manner. The placing of this new dam will raise the capacity of water in the pond to 184 feet, 9 inches. The expense has been \$1,362.53.

ENLARGEMENTS AND IMPROVEMENTS.

A much needed improvement has been made by an extension of twenty-six feet to the gate-keeper's barn, at a cost of \$300. The "kit factory" on the outlet stream, below West Concord street, occupied by Mr. Moses Humphrey, has been put in a state of repair at an expense of \$225, and re-leased for a term of five years from Feb. 1, 1878, at an annual rent

of \$392. This will be hereafter a source of additional income, no revenue having accrued previously, as by the terms of the original purchase Mr. H. held free occupancy to the date mentioned.

PLANS OF STREET MAINS AND SERVICE PIPES.

Elaborate and detailed plans of street mains and service pipes, showing also the city sewerage, have been furnished by Mr. Charles C. Lund, engineer of the Works. They are based upon a scale of one inch to each forty feet, are drawn from careful surveys and measurements, and evince much artistic skill in their execution. The cost has been \$227.75.

PROSPECTIVE IMPROVEMENTS AT LONG POND.

The improvement of the grounds at Forge dam and its vicinity will receive the attention of the Board during the coming year. The fencing of the gate-keeper's premises, and the reclaiming of land belonging thereto, west of the road across the dam, and near the waste-way, bringing it to an arable condition, should be effected. The inclosure of all the grounds pertaining to the Water-Works, east of and below the dam, and taking preliminary steps towards forming the same into a park, which in time, with inconsiderable expense, may be rendered very beautiful, is a project which has already been considered, and is much to be desired. Private contributions in its aid have already been indicated. The completion of a park at this point, with a shore road around the entire pond, would afford an attraction which, with the natural beauty and varied scenery of this charming sheet of water and its surroundings, is rarely exceeded, if equalled.

SUPPLY OF WATER—GENERAL DATA.

The volume of water in Long Pond during the year has been comparatively even and regular. The highest point attained was April 27, being 178.50 ; and the lowest March 4,

being 174.30; a variation of 4.20 feet. The record gives the height on the first of each month as follows :

January,	176.00	July,	177.55
February,	175.05	August,	176.90
March,	174.30	September,	176.20
April,	177.10	October,	174.90
May,	178.50	November,	175.55
June,	177.20	December,	177.30

The height January 1, 1878, was 177.60, being 1.60 feet higher than at the corresponding date of 1877, and 2.20 feet less than for the highest point during the year. The average for the year was 176.46. The average for the four preceding years was,—1873, 175.86 ; 1874, 179.50 ; 1875, 180 ; 1876, 180.28. To give the reader a clearer insight of this matter, we subjoin the following data : Height of dam, 187 ; overflow, 184.75 ; Holden's high-water mark (old dam), 179.17 ; lowest point to which water may be drawn from conduit, 167. The base or *datum* line of reckoning is from low-water level in the Merrimack river at Lower Bridge. For height of other points in the city, see table appended to this report.

In the spring of 1876 the pond was completely filled by the melting snows and abundant rains, and large quantities of water were of necessity discharged through the various pipe outlets to reduce the general volume below the then overflow (183). The spring of 1877 furnished little water from thaws, and the rains of April alone added materially to the supply. The summer rains were sparse and scanty, and the pond was replenished and kept up mostly from its never-failing springs. In the fall, the rain-fall was reasonably abundant, and left the store good for the winter.

VARIOUS MATTERS.

Mr. John Kimball has acted since August last as president *pro tem.*, in the absence of Mr. Benjamin A. Kimball, now in Europe.

The Board take pleasure in commending the superintendent for his care and good management, and his faithful services generally.

The Superintendent estimates the average amount of water drawn daily during the year to be 550,000 gallons. The above estimate is made from meter measurements at different seasons of the year.

There has been laid during the year, for distribution pipes, &c., 765 feet of 6-inch, 258 feet of 1-inch, 955 feet of $\frac{3}{4}$ -inch, 1 stop gate, and 91 service pipes, or 2,192 feet.

There is on hand 2,303 feet of 4-inch cement pipe ready for use, which was purchased, late in the season, of the American Gas & Water Pipe Co., at a cost of about 28 $\frac{1}{2}$ cents per foot; total, \$622.60. It will probably be laid during the coming summer.

REPORT

OF THE

COMMITTEE ON CITY FARM.

To the City Council :

The undersigned, Joint Standing Committee on the City Farm, respectfully submit the Twenty-fifth Annual Report of the receipts and expenditures of the Farm, for the year ending Feb. 1, 1878, with the inventory belonging thereto. Your committee are satisfied that the inmates at the Farm have been properly cared for, and we are pleased to report a large increase in the products of the Farm over previous years, but at the same time have thought best to make a large reduction in the appraisal of the personal property. The great depreciation in value, if kept up to the appraisals of previous years, would not give a fair showing of the property belonging to the Farm ; therefore we have thought best to appraise articles at their market value at the present time, that the citizens of Concord might have a correct understanding of its financial condition.

JOHN G. TALLANT,
GEO. F. UNDERHILL,
IRA C. PHILLIPS,

Committee on City Farm.

INVENTORY OF PROPERTY AT CITY FARM, FEB.
1, 1878.
